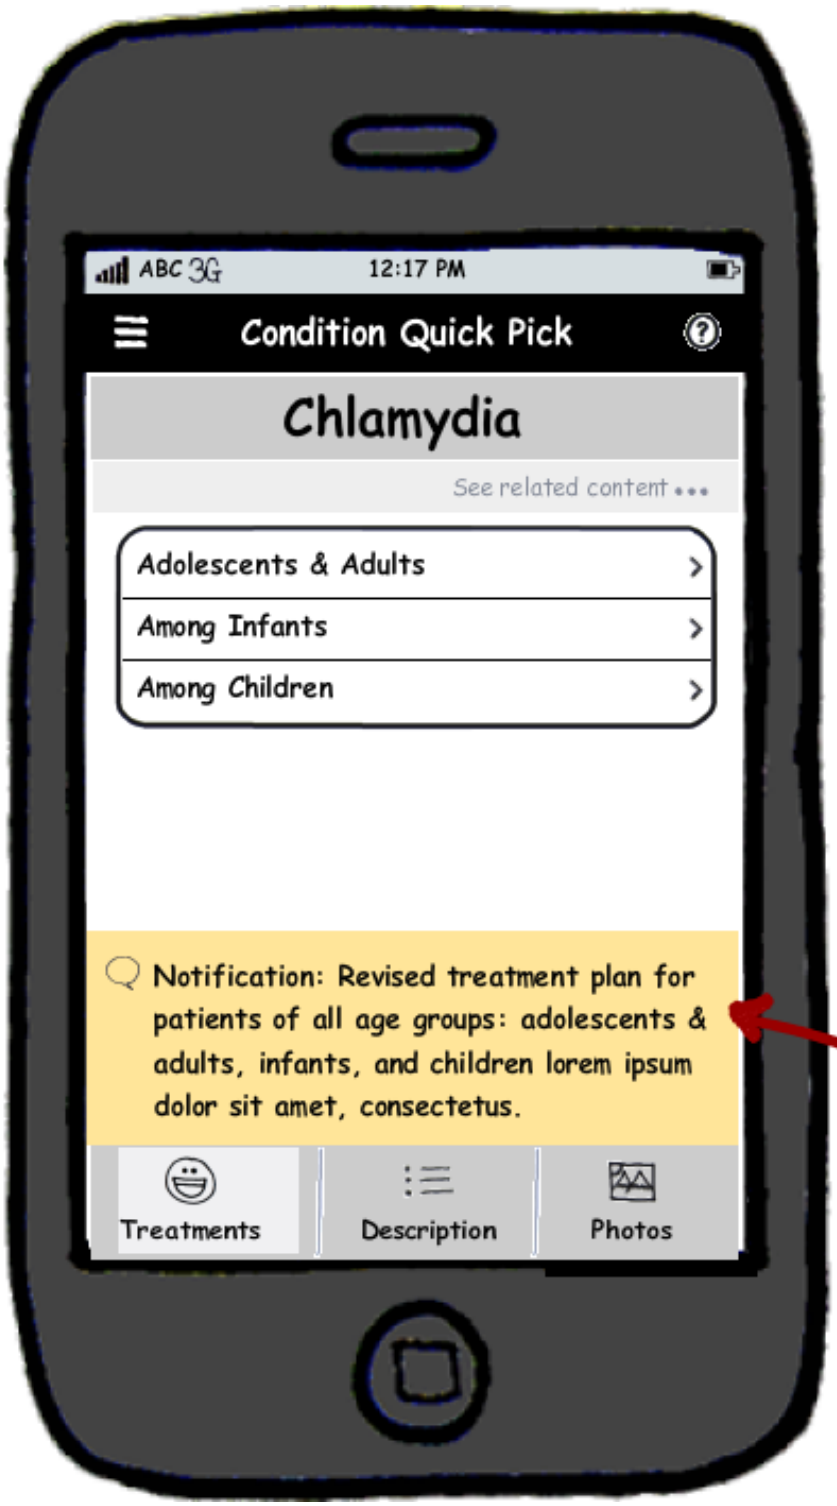
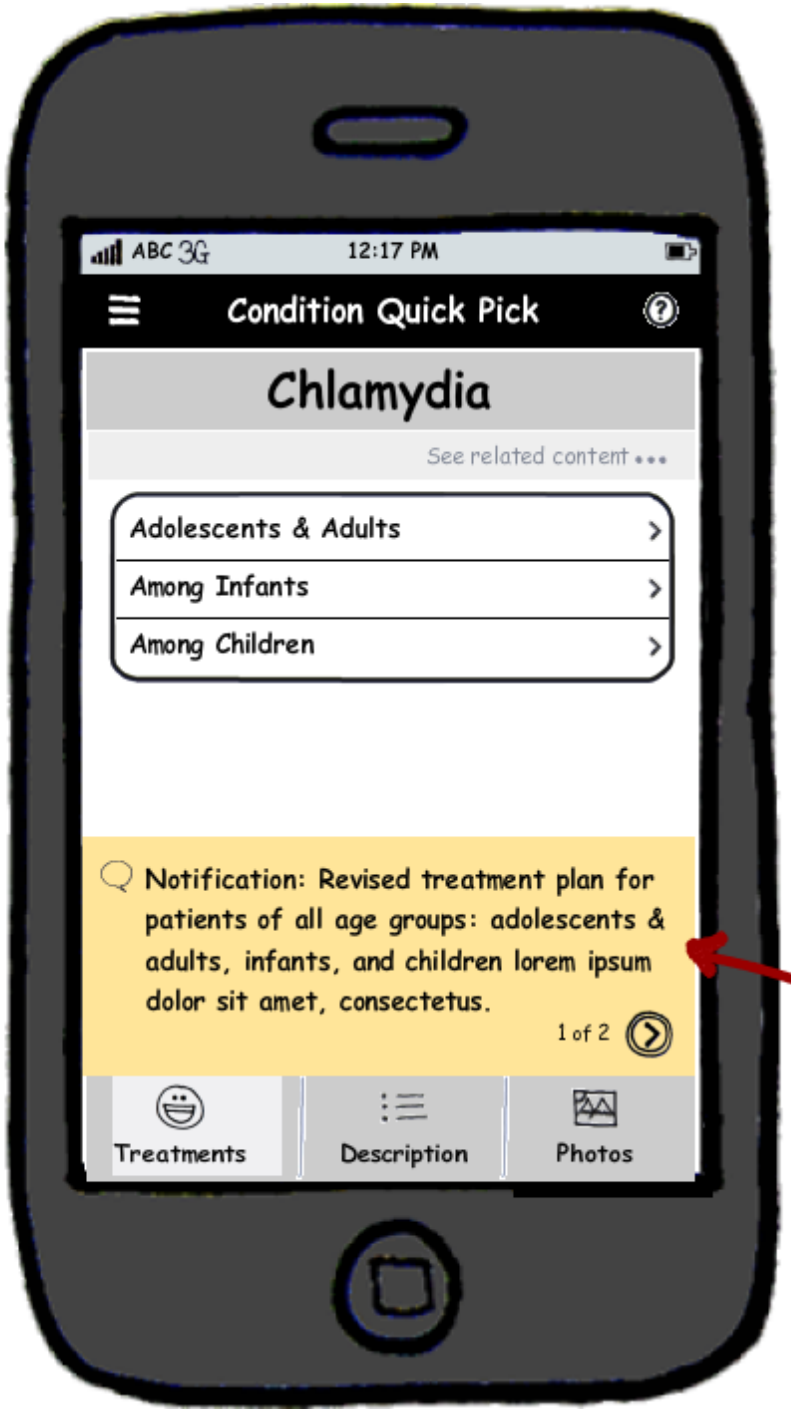
Notification: Revised treatment plan for...
Treatments
Description
Photos
If applicable, a notification appears in a banner at the bottom (only one line of text, then "..."). Tap it to read entire notification.



Once user taps the notification banner, it displays all the text. Once user taps it again or anywhere in the white space, it collapses to an icon. See next screen...

Persistent, non-obtrusive icon stays here. It is translucent, so can see content beneath. Tapping this makes the notification appear on the screen again.



In the event that a screen has multiple notifications, the user can navigate through them. (This design assumes that multiple notifications are not the common case, and if there are multiple notifications, there are only a few (2 or 3); however, if this is untrue, we will need to rethink this design),

Partner Management
When patients diagnosed with chlamydia or gonorrhea indicate that their partners are unlikely to seek evaluation and treatment, providers can offer patient-delivered partner therapy (PDPT), a form of expedited partner therapy (EPT) in which partners of infected persons are treated without previous medical evaluation or prevention counseling. Because EPT might be prohibited in some states and is the topic of ongoing legislation in others (67), providers should visit www.cdc.gov/std/ept to obtain updated information for their individual jurisdiction.

Example of persistent icon w/ transparency so text beneath can be seen.

If needed, would it be possible for the user to touch anywhere on the screen (except a control), and the icon disappears until user touches non-control area on screen again? And the icon could be reset to appear once user leaves this tagged topic?

If user had picked Special Considerations, which has sub-topics

User taps Notifications

'New' notifications are the ones indicated in bold w/ an icon. The user hasn't read it yet.

A user can tap a notification to read the entire notification. From there, user can opt to view the corresponding screen where it appears. (see next screen)

User cannot permanently delete a notification from here. Possibly could in settings???

If user taps a notification (on the previous screen), he/she will come to a screen like this. The entire notification is displayed, as well as the topics to which it applies. The user can select a topic, and see it on the corresponding screen. Topics that have not yet been accessed are in bold (e.g., Gonorrhea and HPV here).

Example of notification that applies to a single topic.

Pre-exposure Vaccination
Pre-exposure vaccination is one of the most effective methods for preventing transmission of some STDs. Two human papillomavirus (HPV) vaccines are available for females aged 9–26 years to prevent cervical precancer and cancer (15,16): the quadrivalent HPV vaccine (Gardasil) and the bivalent HPV vaccine (Cervarix). Gardasil also prevents genital warts. Routine vaccination of females aged 11 or 12 years is recommended with either vaccine, as is catch-up vaccination for females aged 13–26 years. Gardasil can be administered to males aged 9–26 years to prevent genital warts (17). Details regarding HPV vaccination are available at
